

Exputec, headquartered in Vienna, Austria, is the leading data science and software company for the biopharmaceutical and industrial biotech industry. Exputec provides innovative software products and unique algorithms to the biotech industry to optimize manufacturing processes.

For our team in Budapest we are hiring a

Software developer/ Web developer (m/w)

As a software developer, you take over a responsible and creative position within Europe's leading data science companies for the biotech industry.

As part of an interdisciplinary data science team (software developers, biotechnologists, data scientists), you realize data science solutions for professional users working in the biotech industry. You use your software development skills to contribute to the development of a web-oriented software product with focus on innovative front-ends. Based on your experiences and know-how in current web technologies, you actively progress and shape the development of cutting edge software products for professional users.

The following qualifications are expected:

- At least 3 years hands-on experience with web development technologies in industry or open-source projects
- Practical experiences with OOP in Python, Django, relational DBs, CSS, HTML, JavaScript/jQuery
- Preferably practical experiences with Angular JS and Bootstrap frameworks -
- Practical experiences with source control, remote development, issue tracking, build and test automation
- Proficient in professional English to engage in deep technical discussions with international colleagues

We look forward to receiving your application and expected this per E-mail to careers@exputec.com. For a first contact, please contact Ms. Henrieke Meyer + 43- (0) 1-9972849.
